Ex No: 05 DATE:	Event registration form using PHP and MySQL

AIM:

To design and develop a database-driven event registration application using HTML, PHP, and MySQL.

PROCEDURE:

1. Create a project folder named **Event_Registration.**
2. Set up Apache and MySQL using XAMPP.
3. Create a MySQL database named event_management.
4. Create the event_registrations table to store registration details.
5. Create required files :
    - index.php
    - registration.php
    - register.php
    - participants.php
    - login.php
    - db.php
    - style.css
    - database.sql.
6. Design the Event Registration form using HTML.
7. Add required fields :
    - Participant Name
    - Email Address
    - Mobile Number
    - Institution / Organization
    - Event Category
    - Event Name
    - Registration Date
    - Registration Type
    - Team Name
    - Number of Participants.
8. Apply CSS styling to the registration form and admin page.
9. Use JavaScript to handle category, event, registration type, and input validation.
10. Connect PHP with MySQL using the mysqli connection.
11. Submit the registration form data to register.php using the POST method.
12. Validate required fields, email address, mobile number, and participant count.

13. Check for duplicate registration using the participant email and selected event.
14. Insert valid registration details into the event_registrations table.
15. Display “Event registration completed successfully.” after successful registration.
16. Provide an admin login and display registered participants after authentication.
17. Display Registration ID, Participant Name, Email, Mobile, Institution, Team Name, Event Name, Category, Type, Count, and Date in the admin table.
18. Test the application using valid input, empty fields, invalid email, invalid mobile number, duplicate registration, individual registration, and team registration.

HTML USED:

<!DOCTYPE
<html>
<head>
<meta>
<title>
<link>
<body>

<form>
<label>
<input>
<select>
<option>
<button>
<script>

CSS USED:

background
color
font-family
margin
padding
display
flex
grid
width
border

border-radius
box-shadow
font-size
font-weight
text-align
cursor
:hover
:focus
@media

JAVASCRIPT USED :

const
function
let
document.getElementById()
document.querySelector()
.value
.innerHTML
.addEventListener()
preventDefault()
alert()
trim()
parseInt()
isNaN()

PHP USED :

$_POST
$_SESSION
isset()
empty()
trim()
require_once
header()
exit()
date()
intval()
mysqli_connect()
mysqli_query()
mysqli_fetch_assoc()
mysqli_num_rows()
mysqli_real_escape_string()

filter_var()
preg_match()
htmlspecialchars()

MYSQL USED :

CREATE DATABASEUSE
CREATE TABLE
INSERT INTO
SELECT
WHERE
ORDER BY
PRIMARY KEY
AUTO_INCREMENT
VARCHAR
INT
DATE
NOT NULL

database.sql :

```
CREATE DATABASE IF NOT EXISTS event_management;

USE event_management;

CREATE TABLE IF NOT EXISTS event_registrations (
    registration_id INT AUTO_INCREMENT PRIMARY KEY,
    participant_name VARCHAR(100) NOT NULL,
    team_name VARCHAR(100) NOT NULL,
    email VARCHAR(100) NOT NULL,
    mobile VARCHAR(15) NOT NULL,
    institution VARCHAR(150) NOT NULL,
    event_name VARCHAR(150) NOT NULL,
    category VARCHAR(100) NOT NULL,
    participants INT NOT NULL,
    registration_date DATE NOT NULL,
    registration_type VARCHAR(20) NOT NULL DEFAULT 'Individual'
);
```

db.php :

```
<?php
$servername = "localhost";
$username   = "root";
$password   = "";
$dbname     = "event_management";
$conn = mysqli_connect($servername, $username, $password, $dbname);
if (!$conn) {die("Database connection failed: " . mysqli_connect_error());}  ?>
```

index.php :

```
<!DOCTYPE html>
<html lang="en">
<head>
   <meta charset="UTF-8"><title>Event Registration</title>
   <link rel="stylesheet" href="style.css">
</head>

RESULT:

An Event Registration web application was successfully designed and developed using HTML, CSS, PHP, and MySQL. The application validates registration details, stores the data in MySQL, checks duplicate registrations, and displays registered participants to the administrator.
